DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3, 6-8, and 12-14 are rejected under 35 U.S.C. 102(e) as being anticipated by Mehr, U.S. Patent # 6,545,534 B1.

Fig. 2 of Mehr discloses an amplifier comprising: amplifier having variable gain gm1, gm2 can be read as an amplifier wherein Inp and Inn can be read as an input signal; resistor R2 can be read as a component provided across an output of said amplifier.

Regarding claims 12-14, although Mehr does not have his method of implementing an amplification circuit for amplifying an input signal to generate an output signal written out structurally, the method resides inherently in his apparatus.

Allowable Subject Matter

Claims 4, 5, 9-11, and 15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: prior art does not teach nor render obvious an amplifier that has, in combination with other limitations, a resistance value of said resistor is chosen using the equation:

$$G300 = (1/B300) / (1 + (S_c * (1 + P * V_{out}) + S390) * 1 + Q * V_{out} * (S_c + S390) H_c / H_c * B300)),$$

wherein said resistance = $(1/S390)$, G300 represents an amplification factor of said amplification circuit, B300 represents a feedback factor of said feedback circuit, S_c , P, Q and H_c are determined by a manufacturing process used to implement said amplification circuit..

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patents # 6,150,881, # 5,990,737, and # 3,875,523 contain some limitations of the claimed invention.
